Art Unit: 2854

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 - 8, drawn to a printing system, classified in class 101, subclass 463.1.
- II. Claim 9, drawn to a lithographic printing plate, classified in class 101, subclass 453.
- III. Claims 10 and 11, drawn to a hydrophobic particle having more than 0.1 wt. % of nitrogen, classified in class 528, subclass 44.

The inventions are distinct, each from the other because:

Inventions I and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case, the printing system could use a light sensitive printing plate. On the other hand, the printing plate could be exposed and developed off-press.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, claims 10 and 11 appear to merely recite an intended use of the thermoplastic polymer particles. Since an intended use of a product does not limit a claim, claims 10 and 11 are not deemed to incorporate any limitations with respect to the printing plate.

Art Unit: 2854

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the polymer particles have no relation to the printing system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications and divergent subject matter, restriction for examination purposes is proper.

Each of claims 9, 10, and 11 are improper dependent claims treated as independent claims written in shorthand format. See M.P.E.P. § 608.01(n) III. Infringement Test.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen Funk at telephone number (703) 308-0982. The examiner can normally be reached Monday - Friday, except Wednesdays, from 7:00 am to 5:30 pm.

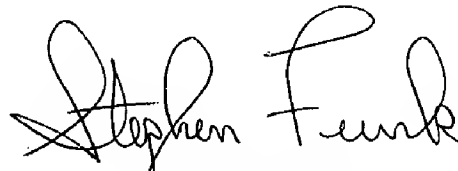

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Hirshfeld, can be reached at (703) 305-6619.
